The Mother of All Revelations

THE DATA

- This is it -

30th November, 2023

<https://rumble.com/v3yqgsf-liz-gunn-the-mother-of-all-covid-19-vaccine-revelations-data-revealed-in-th.html>

Liz Gunn
avvocato, giornalista
leader del partito NZ Loyal Party

Barry Young
amministratore di database per il
ministero della sanità pubblica della
Nuova Zelanda
incaricato di sviluppare un sistema
informatico “pay per dose”

Dati governativi grezzi

Il database contiene dati su 2,213,062 vaccinati per un totale di 4 milioni di voci:

- Un numero ID personale
- Tipo di vaccino
- Numero del lotto (118 lotti in totale)
- Numero della dose di vaccinazione (1^a, 2^a, 3^a, ecc.)
- Data di nascita
- Età
- Data di morte (se applicabile)

"Il database non riporta altri eventi avversi, solo decessi, dato che la morte è l'evento avverso definitivo, è innegabile, è binario, è vivo o morto, uno o zero" ... "statisticamente è molto difficile da confutare"

>120 decessi / giorno

Come prima cosa Barry Young inizia a selezionare i giorni, dal **gennaio 2011 all'ottobre 2023**, durante i quali in NZ si sono verificati più di **120 decessi**.

Essendo la NZ un paese molto circoscritto, di appena 5 milioni di abitanti, sono molto rari i giorni nei quali si verificano più di 120 decessi giornalieri (es. **terremoto di Christchurch**: 268 morti).

Terremoto di Christchurch del 2011

Da Wikipedia, l'enciclopedia libera.

Coordinate: 43°35′00.24″S 172°42′03.6″E﻿ / ﻿43.58339°S 172.701°E﻿ / -43.58339; 172.701 (Mappa)

Il **terremoto di Christchurch del 2011** fu un sisma di **magnitudo** 6,3 che colpì la città **neozelandese** di **Christchurch** alle ore 12:51 **UTC+12** del 22 febbraio 2011.

Terremoto [[modifica](#) | [modifica wikitesto](#)]

A causa del sisma molti edifici, compresa la cattedrale cittadina, furono gravemente danneggiati e crollarono, totalmente o parzialmente. I morti registrati furono 185, più di 1 000 i feriti e non accertati i dispersi.

Cinque mesi prima, il 3 settembre 2010, **Christchurch** era già stata colpita da un'altra *scossa di terremoto*; benché all'epoca

"Prove me wrong. I would love to be proved wrong"

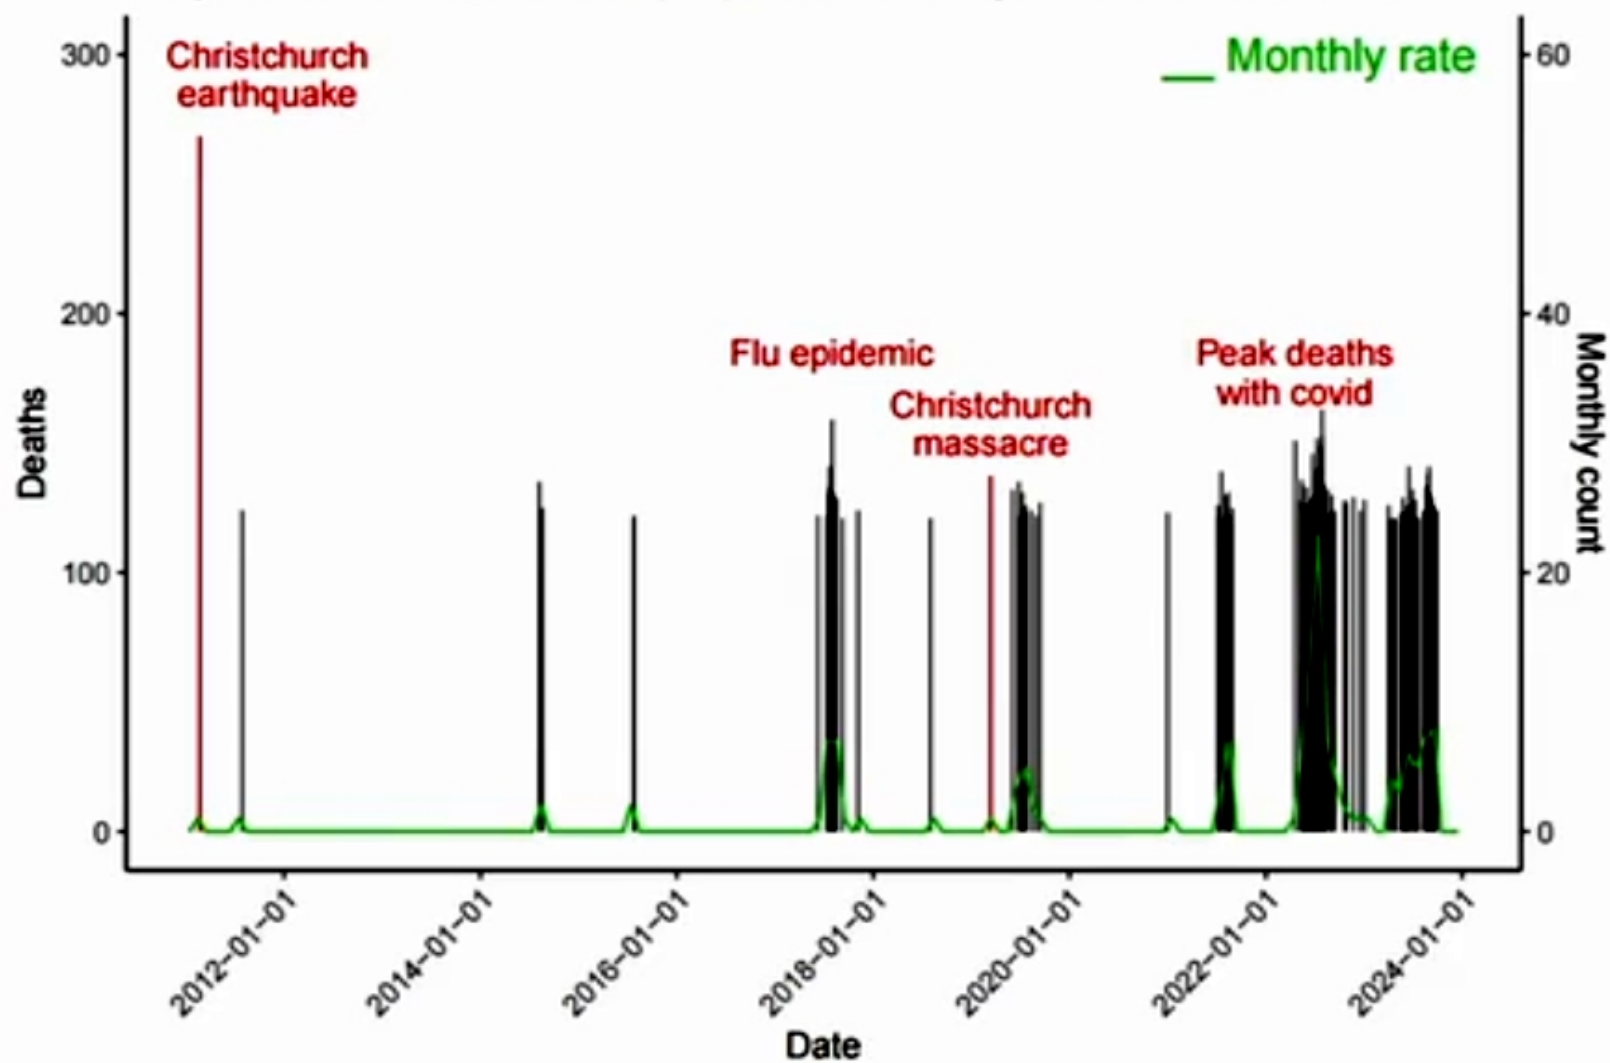

Durante il **2022** in molti giorni, anche consecutivi, si sono verificati più di 120 decessi giornalieri.

Nonostante questi numeri siano estremamente allarmanti per un paese come la NZ, i mainstream media non ne hanno fatto parola, come se per esempio avessero ignorato un evento del calibro del terremoto di Christchurch.

Le critiche ai dati neozelandesi

IGOR'S NEWSLETTER

I analyzed the "Leaked NZ Whistleblower Data" and Suggest to Be Wary of It

The data has huge gaping holes in it and may be doctored

IGOR CHUDOV
2 ΔΕΚΕΜΒΡΙΟΥ AT 18:30

Bad Data and Inconsistent Story

Be aware that the "leaked NZ data" is **problematic**; even the story accompanying it is less than entirely believable.

I spent an entire day analyzing it.

I downloaded it as a CSV file, uploaded it to my MySQL database server, and analyzed it. As I will show,

- The "whistleblower data" is **missing huge chunks of information** that should logically be present.
- **Liz Gunn of NZ is misinterpreting it** by trying to pass normal nursing home deaths as evidence of "super deadly batches" and "mass vaccine casualties"
- The data has problems that are *incompatible with the story of its origin*. It cannot be a full snapshot from a working payment database. **Therefore, the story of its origin is suspect.**
- **The actual vaccine casualties may reside in the missing pieces of data** that the "database" does not provide.

The New Zealand vaccine data: what I actually saw and analysed and what the limitations are

[NORMAN FENTON](#)

2 DIC 2023

The data and its provenance

Conclusions

If the dataset was a real, unbiased and representative subset of those vaccinated, then it is potentially one of the most important publicly available datasets for examining covid vaccine safety, despite the fundamental limitation imposed by absence of data on the unvaccinated. It provides significant evidence of lack of safety of the covid. **However, some of the conclusions drawn from the data are confounded by biases.** In particular, the conclusion that some batches were especially deadly is **confounded by their very different age and time of vaccination profiles.** While the dataset does appear to be a complete record of all 'pay-per-dose' vaccinations, the fact that it contains a disproportionate number of vaccinee deaths, means that we must be extremely careful about the validity of some generalisable

New Zealand Whistleblower Facing 7 Years in Prison for Exposing Mass Vax Deaths

Frank Bergman

© December 5, 2023 - 12:55 pm

3 Comments

A New Zealand government whistleblower is now facing up to seven years in prison after being arrested for going public with data exposing the country's mass deaths among the Covid-vaccinated population.

L'agenzia sanitaria governativa neozelandese, ha ottenuto un'ingiunzione che "impedisce qualsiasi pubblicazione dei dati" trapelati da Young.

Young è stato accusato di accesso a un sistema informatico per "scopi disonesti".

Secondo gli esperti legali, l'accusa prevede una pena massima di sette anni di reclusione.

Steve Kirsch ✓
@stkirsch

There is nothing wrong with the New Zealand data.

There are only people who don't know how to interpret the data that was delivered. That is the problem.

The safety signal is unambiguous. And the safety signals, consistent with what we see in other systems from other countries.

Just to prove **anyone challenging NZ data** is "big hat, no cattle" please use the Contact Me link on my pinned tweet if you will bet \$1M against my claim that this data shows that the shots killed 1 per 1,000 doses vs. that the shots are safe.

Update - NZ

Whistleblower

He may be a sincere person

IGOR CHUDOV

3 ΔΕΚΕΜΒΡΙΟΥ AT 19:50

Subscribe

I made a post yesterday describing a New Zealand whistleblower who shared anonymized data containing dates of COVID vaccinations and dates of death, where applicable.

At this point, I believe that Barry Young was more likely to be sincere than insincere in his intentions and actions.

My previous questions and comments about Liz Gunn's statements about nursing home deaths and data quality still apply, with one exception: the partial nature of the data is explained by the fact that some shots were not paid through the system that Barry Young was supposedly administering. (I hope more clarity emerges).

This clarification is vital since I questioned the sincerity of the person who possibly risked his life to disclose data.

I greatly hope that, after thorough analysis, the data will yield useful information!

Grazie per l'attenzione
